## ***Information Communication Technology (ICT) tools contribute***

- potential to increase students' motivation.
- connect students to many information sources, self-confidence & self esteem to learn.
- students feel more responsible for their own learning.
- support active in-class and out-class learning environments.
- instructors to allocate more time for facilitation.

Use of ICT tools in teaching & learning process - Used by researchers & many educators.

**Contribution of ICT in modernizing learning & teaching - benefit in terms of**

**quality of education, flexibility, access, & its cost.**

## Animations & Transitions

Animating elements of slides & using Slide Transition are two of the most powerful features that PowerPoint offers. However, it is very easy to overdo your use of these features & create a presentation where the animation distracts your audience from the content of your presentation.

- Use animations to show progression.  
Animation is very effective at revealing a process one stage at a time.
- Be conservative. Make sure that any animation you use serves a clear purpose (e.g. to introduce a new piece of information at an appropriate point). If you cannot think of a reason to animate your slide - don't do it!
- Be consistent. Try to ensure that you use similar types of animation for similar functions. e.g. if your text always drives in from the left it will be distracting if it suddenly appears from another direction or uses another animation technique.
