Certificate Course

Name of the Course	CHEMISTRY EDUCATION AND MIRACLES
Aim and Objectives	<ol style="list-style-type: none">1. Development of interest in chemistry in students.2. To introduce miraculous demonstrations as an interactive educational tool to communicate chemistry.3. To link classroom chemistry to the daily activities of a human being.4. Development of a value - Scientific Temper.
Focus	One of the aims of education is 'Development of a value - Scientific Temper' and to achieve the same, certain modifications has to be done in the curriculum as per the suitability. The findings of research study interlinking 'chemistry education, chemistry of so called miracles, scientific temper development and the superstitions associated with the miracles' suggests that the chemistry based miraculous demonstrations should be included in curriculum. This course will assist students of F.Y/S.Y./T.Y.B.Sc class to link classroom chemistry to the daily activities of a human being. This course will also serve as a bridge course for students interested in knowing the applications of chemical properties of daily used materials used in performing of so called miracles.

CERTIFICATE COURSE IN STEVIA TISSUE CULTURING

Introduction:

Stevia, a natural sweetener, comprises of 200 species of herbs and shrubs from the family *Asteraceae* (Composite). Stevia contains ent-kaurene, a diterpene glycoside commonly known as stevioside which is 150–300 times than sweeter sugar. Among different chemical constituents, stevioside has a potential mode of actions in controlling type 2 diabetes.

Plant tissue culture involves excising plant tissues and growing them on nutrient media. It is used rather broadly to include several variations, such as meristem culture for propagation of virus-free plants, protoplast culture, cell suspension culture, tissue and organ culture, and anther or pollen culture for producing haploid plants.

Plant tissue culture can play an important role in the commercial production of stevia. A large amount of disease-free stevia plants can be produced throughout the year using tissue culture technique. The plant and tissue cultures have enabled us to increase our knowledge in many areas including differentiation, cell division, cell nutrition, and cell preservation, but today, cells are cultivated in vitro in bulk or as clone from single cells to grow whole plants from isolated meristem, then induce callus, and develop complete plantlets by organogenesis or by embryogenesis.¹⁸ Tissue culture is the only rapid process for the mass propagation of stevia.

Stevia can be added to tea and coffee, cooked or baked goods, processed foods and beverages, fruit juices, tobacco products, pastries, chewing gum, and sherbets. Stevia-enriched food products bring several benefits to human society.

Commercial marketing of products stevia in different form such as leaf powder, liquid and fresh leaves has become a potential adventure for many biotechnological companies because of its large demand.

**CERTIFICATE COURSE IN
VERMICOMPOST TECHNOLOGY**

Introduction:

Vermicomposting technology is known throughout the world. It may be considered a widely spread, though not necessarily popular technology. Vermicompost is considered as a high nutrient biofertilizer. Vermicomposting is the process of conversion of organic wastes into finely degraded substances using earthworms, it is an alternative method for waste management. It plays a major role in improving growth and yield of different field crops, vegetables, flower and fruit crops. Vermicompost is a biofertilizer enriched with all beneficial soil microbes and also contains all the essential plant nutrients like N,P,K. Vermiwash is another important product obtained during vermicomposting, it is the liquid that is collected after the passage of water through a column of worm action. Vermiwash is rich in enzymes, plant growth hormones, vitamins along with micro and macronutrients which increases the resistance power of crops against various diseases and enhances the growth and productivity of crops.

Aims&Objective:

- Students will get proper knowledge of Vermicompost technology.
- Students will get the employment.
- They can generate employment.
- They will also turn towards organic farming.

FOCUS:

To convert unwanted, organic matter, particularly food material, vegetables, plant waste material into compost.
